

## E. coli RuvB Protein, functional

Cat.# 01-009, Size: 20 ug; Cat.# 01-010, Size: 100 ug

### Background:

*E. coli* RuvB protein forms a complex with RuvA protein at the late stage of homologous recombination and recombination repair and binds specifically to the Holliday structure which is the intermediate of recombination, allowing the migration of Holliday junction using ATP hydrolysis energy and expands the heteroduplex region.

### Specifications:

Product: Full-length recombinant protein, highly purified (95% >)

Form: 50% glycerol, 10 mM Tris-HCl (pH7.5), 2 mM EDTA, 100 mM NaCl, 5 mM mercaptoethanol

Concentration: 1.0 mg/ml (determined by BCA method)

Storage: Ship at 4°C or at -20°C. Spin-down and store at -20°C or -80°C for longer period

### Applications

1. Functional studies in vitro; RuvA and RuvB form a complex that promotes Holiday junction ( a recombination intermediaetae) branch-migration by using ATP hydrolysis energy (Ref.2).
2. Standard antigen for western blotting and ELISA
