

Anti-At 12S (12S Globulin) antibody, rabbit polyclonal

Cat. # 81-123 Size: 200 µg

Background:

Major 12S seed storage protein CRC (globulin) is synthesized on the endoplasmic reticulum as precursor and then transported to storage vacuoles, where it is processed at a conserved Asn-Gly peptide bond by an asparaginyl endopeptidase to produce two mature polypeptides referred to as alpha and beta subunits that are joined together by a disulfide bond. Phosphorylated in seeds on some Tyr residues in response to abscisic acid (ABA)

Subcellular location: Vacuole

Specifications:

Storage: Shipped at 4°C and store at -20°C

Form: 2 mg/ml in PBS, 50% glycerol. Filter sterilized. No preservative or carrier added.

Purity: IgG, affinity-purified with Protein A

Immunogen: *A. thaliana* 12S globulina-subunit purified on SDS-PAGE.

Reactivity: Reacts with *A. thaliana* 12S globulin (precursor and α-subunit). Not tested in other species

Applications

1. Western blot (1/3,000- 1/10,000 dilution)
2. ELISA (assay dependent)
3. Immunohistochemistry (1/100)
4. Immunoelectron microscopic analysis (1/50)

Other applications have not been tested.

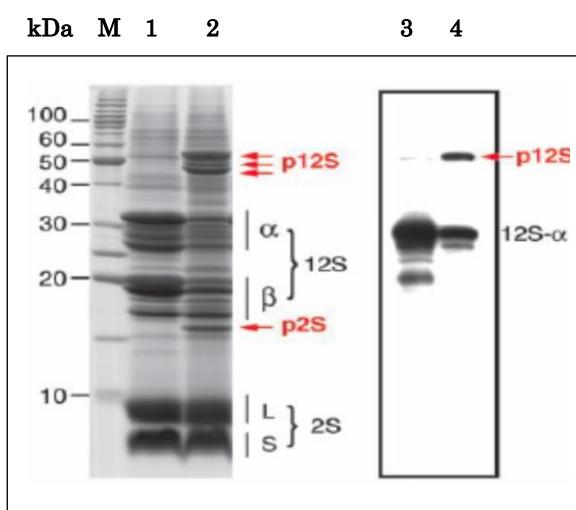

Fig. 1 Western Blot of the precursor 12S globulin and 12S- α subunit of the mature forms in extract of arabidopsis dry seeds.

M: Protein size markers

1. SDS-PAGE of wild-type seed.
 2. SDS-PAGE of of *atvst1-1* mutant (defective in storage protein transport) seed.
 3. Western blot of wild-type seed
 4. Western blot of *atvst1-1* mutant seed
- The anti-12S globulin antibody was used at 1/5,000 dilution.
- P12S is the precursor of 12S globulin.
 12S- α is the α -subunit of 12S globulin.
